Library of Congress Cataloging-in-Publication Data are available from the Library of Congress.
HE MEDIEVAL POTTERY from Zaraka dates not only from the Cistercian monastic period of the site, but also, and to an even greater extent, from the later occupation of the site. Almost all the pottery found seems to date from the thirteenth through fifteenth centuries, so the range extends at the very least more than a century after the Cistercians left the site. The pottery is extremely fragmentary, and diagnostic material from only a few trenches was found in sufficient quantities to allow reasonably close dating by comparanda and by coins. There are relatively few pieces that can be firmly identified, many of which are represented in the catalogue.

It is not surprising to find at Zaraka modest pottery of the thirteenth century, befitting a Cistercian establishment. The pottery is fairly typical of the rural Peloponnese in the thirteenth century in that there are few imports and few glazed pieces.1 Nothing about the pottery betrays the western origins of the monks. The glazed wares, both sgraffito and glaze- and slip-painted, are minimally decorated. Notable among the thirteenth-century pottery are fragments of four glazed bowls featuring sgraffito birds that were all apparently decorated by the same hand.2 Either these bowls were brought to Zaraka together, or perhaps more likely (since the shapes of the bowls are all somewhat different), there were limited sources of glazed wares nearby, and this artist’s workshop was one of them.

But a significant amount of the Zaraka pottery dates from the fourteenth century and into the fifteenth century. Italian imports, the presence of handmade cooking vessels, and associated finds like the coins all confirm these dates. In southern Greece, pottery of the fourteenth and fifteenth century is best known from populous centers like Athens, Thebes, Isthmia, and Clarentza, but the period is still less well documented in the archaeological record than that of the earlier Frankish period.3 The Zaraka material is also different from those places.4 I suspect that it will not turn out to be exceptional, however. Medieval pottery of the same general period from the mountaintop village of Agios Elias above the Asea Valley in Arcadia—a remote location—has both Italian imported pottery and handmade cooking pots. By the fourteenth and fifteenth centuries, Italian imports are still found in sites with strong historic and geographic ties to the west like Patras, but they are not necessarily the markers of cultural ties with Italy that they were in the thirteenth century.5 This material is often a tantalizing indication of the new directions in which scholars may be led by a broader knowledge of the pottery of this period, in terms of trade, production, or consumption.

I present here a brief discussion of the assemblages from the trenches with the most (and most diagnostic) pottery—Trenches 3, 4, 5, and 10—followed by a catalogue of the glazed, coarse, and cooking wares (most of which come from one of these four trenches). The catalogue represents examples of the typical pottery found at this site and other contemporary sites, but also includes some of the more extraordinary pieces. In some cases, no specific date has been assigned
to individual catalogued items, but a general sense of the range of dates can be gleaned from the discussion of the trenches.

Trenches (see Fig. 1.12)

Most of the pottery in Trenches 3 and 4 would suggest a date in the thirteenth into the fourteenth century, with most of the fill of Trench 3 probably pre-dating Trench 4 by a few decades. (There are a very few twelfth-century sgraffito sherds.) Trench 10 probably spans a longer period; while it includes material that probably dates from the fifteenth century, as a whole it probably ranges from the late thirteenth century through the fifteenth century. Trench 5, from which came some of the most interesting pottery, probably dates into the fifteenth century.

Identifiable coarsewares (matt-painted jars, incised decorated coarse jars) and hand- and wheel-made cooking wares are not out of line with these dates.

**Trench 3**

Catalogue numbers 1, 2, 4, 5, 6, 7, 8, 23, 31, 32.

Trench 3 abuts the west end of the abbey church; the pottery from this part of the site includes material which must have been used during the Cistercian period. Pottery from this trench includes a few twelfth- and earlier thirteenth-century sherds (sgraffito and incised wares, and slip-painted wares which may date to the thirteenth or into the fourteenth century). Most sgraffito wares are non-figural late sgraffito.6 Glaze-painted bowls also occur. There are no obvious Italian imports. Most of the glazed pottery is undistinguished, and may have been made fairly locally; unusual (but unidentifiable) are at least two pieces of bowls similar to 9, a glaze-painted bowl with thick, glassy glaze.

Coarsewares too include decoration typical of the period, such as several coarse jars with cross-hatched matt paint decoration, either black on gray or red on brown.

There was virtually no cooking ware from Trench 3.

**Trench 4**

Material from Trench 4, adjacent to the gatehouse, appears to date from the thirteenth and fourteenth century; no individual pieces were catalogued. Pottery from Trench 4 is most similar to pottery from Trench 3, despite the coin evidence, which groups Trenches 4 and 5. If the fill in Trenches 4 and 5 were dumped fill, then the material either came from two different places or, more likely given the coin evidence, was dumped at different times.

Several pieces of sgraffito bowls probably date from the thirteenth century; likewise a few small fragments of Italian lead-glazed and maiolica bowls and jugs. At least two sgraffito bowls decorated with birds by the same hand as 3 and 4 were found in Trench 4.

From Trench 4 came many fragments of matt-painted coarseware jars, both black on gray and red on orange or brown clay. Cooking wares are either wheel- or handmade, with wheel-made predominating, unlike the trenches with later material (5, 10) where handmade cooking wares are abundant.

**Trench 5**

Catalogue numbers 11, 13, 14, 15, 16, 17, 18, 20, 24, 26, 27, 28, 33, 34, 35.

Trench 5, although adjacent to the gatehouse like Trench 4, yielded material that appears to date from the fourteenth and into the fifteenth century. Glazed southern Italian “RMR” bowls (in particular 18) are paralleled by bowls from Otranto in southern Italy from the fifteenth century. RMR bowls are mostly otherwise known from contexts in Greece in the thirteenth and
fourteenth centuries. A handled RMR bowl like the Otranto and Zaraka examples has also been found at Chlemoutsi; this and the Zaraka pieces probably indicate that these vessels were imported to southern Greece into the fifteenth century. A base of a fine green-glazed pitcher (20) is metallic ware, similar to pitchers from Corinth that date from the early fourteenth century.

Several glazed pieces are unparalleled and are mostly too small to allow reconstruction of their shape. A type of fine bowl with an out-turned rim that occurs in both green and yellow glaze (15) is a probable import (from Italy?). Some very small pieces preserve bright blue and white decoration, or a lusterware-like glaze (see 19, from Trench 10).

Coarse and cooking wares likewise may date from the fourteenth into the fifteenth century; there are many examples of unusual shapes and decorative techniques, like coarseware with elaborate incised decoration (26). Three extremely fine-walled cooking pots with glazed interiors and high-slung strap handles are particularly distinctive and somewhat unusual (or unpublished) in Greece (35, 36); an example from the excavations at Clarentza has been published, but undoubtedly these cooking pots were used in other parts of the northern and western Peloponnese, at least. Apart from these glazed cooking pots, quantities of handmade cooking wares (33, 34) were found in Trench 5; handmade cooking pots were certainly widely used in the fourteenth century, and here, at least, probably into the fifteenth century.

Although most of the pottery from Trench 5 is unidentifiable coarseware, there are a number of intriguing (and sometimes unparalleled) pieces which may date to the same period. Because of the lack of published pottery from the later fourteenth and fifteenth centuries in Greece, this material may provide valuable comparanda as more sites of the later medieval period are investigated.

_Trench 10/10A_

Catalogue number 19

Trench 10 near the gatehouse, like Trench 5, yielded pottery from the fourteenth into the fifteenth century. Southern Italian lead-glazed bowls with handles are like the Otranto fifteenth-century bowls. There are other examples of Italian imports, perhaps both protomaiolica and archaic maiolica; they occur both as bowls and as pitchers.

Some pieces are unusual, like 19, which is a small piece of a squared, offset bowl rim, with black and white stripes and added blue. There are several green or yellow sgraffito bowls, and a yellow glazed bowl with a tripod mark.

From Trench 10 are also jars that are not found in Trench 5, like matt-paint decorated jars. Cooking wares are both hand- and wheel-made.
Glazed wares

1. Figures 5.1, 5.2

96-C-7. Glaze-painted sgraffito bowl. From Trench 3. P.H. 0.027, est. diam. 0.236.

Small piece of rim preserved. Shallowly flaring bowl with square rim. White slip on interior and over edge of rim; sgraffito design of three lines just below rim and two curved lines below. Thin clear glaze on interior with stripes of green glaze radiating from rim on interior.

Medium hard light brown (10YR 6/4–7/4) with rare small white inclusions; sparkling inclusions. One of the earliest pieces; possibly twelfth century.

2. Figures 5.3, 5.4

94-C-6. Sgraffito bowl. From Trench 3. P.H. 0.049, est. diam. 0.18.

Two joining pieces preserve small part of rim and body; also four additional non-joining pieces. Bowl with carination, small pointed lip. Ridged on outside on vertical part of body. Grayish slip on inside and top of outside. Sgraffito design of uneven free-hand straight and wavy lines around body. Yellowish green glaze over slip.

Medium hard light brown clay (10YR 6/4), frequent small gray inclusions and sparkles.
3. Figures 5.5, 5.6

97-C-1. Sgraffito bowl. From Trench 22. H. 0.072, diam. (rim) 0.173, diam. (base) 0.068.

Most of bowl preserved. Low ring foot with flat resting surface. Flaring wall, pared lower body, wheel-ridged upper body ending in carination and rounded lip. Pinkish white slip on inside and over edge of rim on outside. Sgraffito lines around rim and carination, bird in center bottom. Thin light green glaze unevenly applied over slip, with patches of thicker dark green.

Hard light brown clay (7.5YR 6/6–7/6) with sparkling and tiny dark inclusions. Few very large white chalky inclusions.

4. Figures 5.7, 5.8

95-C-2. Sgraffito bowl. From Trench 3. H. 0.060, diam. (base) 0.050, est. diam. (rim) 0.156.

All of base and small part of wall and rim preserved. Vertical ring base with flat resting surface and conical undersurface. Body turns up vertically at rim, rounded lip. Foot unevenly pared; exterior pared above foot, wheel-ridged above. Light grayish slip covers inside and thinly covers exterior. Sgraffito lines circle upper body; bird in center bottom. Light green glaze on inside and top of rim on outside.

Reddish brown clay (5YR 6/6). Rare large white inclusions, rough break.

Bird similar to 3 although the shape of bowl is different; also two more sherds with similar birds from Trench 4.
5. **Figure 5.9**

96-C-6. Sgraffito bowl. From Trench 3. P.H. 0.051, est. diam. 0.27.

Small piece of rim of very thick, large bowl. Rounded lip. Grayish white slip thickly applied on interior and top of exterior. Thickly incised cross-hatched design around rim. Pale greenish yellow glaze on inside; darker yellow on top of rim.

Very hard gray-brown clay (10YR 4/2) with few large white inclusions.

---

6. **Figures 5.10, 5.11**

96-C-3. Glazed bowl. From Trench 3. P.H. 0.039, est. diam. (rim) 0.12.

Full profile preserved from small part of base and about 1/6 of rim. Offset rim flares out shallowly from body at about half the bowl’s height. Rounded lip. White slip on inside, covered with pale yellow glaze. Drips of yellow on outside.

Soft powdery orange-brown clay (5YR 6/6). Many sparkling and few small white inclusions.
7. Figures 5.12, 5.13

97-C-4. Glazed bowl with offset rim. From Trench 3. H. 0.041, est. diam. (rim) 0.116, diam. (base) 0.045.

Base and 1/4 of body and rim preserved. Small flat ring base, body flares up and turns out horizontally to upturned rounded lip. Heavily encrusted. White slip and thin green glaze inside and on top of outside; glaze pooled in center.

Medium pinkish brown clay (close to 5YR 5/6 at core), rare small to very large white inclusions; light gray sparkling inclusions. Common small pores, smooth break.

8. Figures 5.14, 5.15

96-C-4. Glaze-painted bowl. From Trench 3. P.H. (rim) 0.032, P.H. (base) 0.037, diam. (base) 0.074, est. diam. (rim) 0.17.

Base and non-joining piece of rim. Ring foot with beveled edge and conical undersurface. Shallowly flaring walls. Rim has squared lip. Interior center wheel-ridged. Grayish slip applied to inside and top of outside. Thin murky green glaze applied over interior. Splotch of dark murky green around rim and in center bottom.

Medium orange-brown (7.5YR 6/6) with frequent large chalky white inclusions and sparkles. Very hard. Rough break.
9. Figures 5.16, 5.17

97-C-6. Glaze-painted bowl. From Trench 17.\textsuperscript{12} P.H. 0.030, est. diam. (base) 0.08.

About half of base and small part of wall preserved. Beveled ring foot, flat undersurface, shallowly flaring wall. White slip on inside. Glossy pale yellow-green glaze with added design of circles in green and brown glaze of same consistency. Tripod marks.

Light orange-brown fabric (5–7.5YR 6/6), with no sparkles. Small pores; no other inclusions.

10. Figures 5.18–5.20

97-C-2. Sgraffito bowl. From Trench 23. P.H. 0.041, diam. (base) 0.056.

Base and part of wall preserved. Sharply flaring ring foot with slightly indented smooth undersurface. Smooth wall. Tan slip on inside and outside to top of ring foot. Thick glossy glaze with dark orange appearance applied over inside and covering most of outside, including foot. Two incised sgraffito circles in center bottom. Tripod marks. Cross and letters inscribed on undersurface of base after firing.

Hard fine brownish red clay (5YR 5/6) with sparkling inclusions. Rough break.

Cf. many similar examples of Zeuxippus Ware-like pottery from around the Aegean in Waksman and François, “Vers une redéfinition typologique.”
11. Figures 5.21, 5.22

About 1/3 of rim in pieces and some non-joining sherds (Fig. 5.21 is only rim sherds). Base not preserved. Flaring body, carination, vertical to plain rounded rim. Tan slip over inside and 0.028 down outside of rim. Sgraffito design of thick line around body at carination and zigzag lines around body with gouged dots.

Pinkish brown sparkly clay (7.5YR 5/6) with few very large exploded inclusions.

12. Figures 5.23, 5.24
95-C-4. Glaze-painted bowl. From Trench 15. H. 0.070, est. diam. (rim) 0.179, diam. (base) 0.086.

Base and about 1/4 of body preserved. Rounded ring foot with conical undersurface. Rounded body rising to very slight carination at rounded lip. Lower exterior wall pared; upper part wheel-ridden. Light tan slip. Dark green and brown glaze radiating stripes on interior; drips on outside wall.

Medium-hard light brown clay (7.5YR 6/6 surface; 5YR 5/8 at break). Rare large white inclusions; sparkling inclusions.

Thirteenth century, common; cf. for example, Yangaki, “Γραπτή εφυαλωμένη κεραμική,” 438–39, or Athanassopoulos, Landscape Archaeology and the Medieval Countryside, 120–21, no. 227, fig. 67, no. 704-2-487 (which she relates to Morgan’s [1942] Green and Brown Painted Wares, Group V; see, for example, Morgan, The Byzantine Pottery, 226, no. 531, fig. 182).
13. Figures 5.25, 5.26

93-C-1. Glazed bowl. From Trench 5. H. 0.056, diam. (base) 0.053, est. diam. 0.118.

About half of bowl preserved. Vertical ring foot with flat resting surface and flat underside. Clear or yellowish glaze with no slip over inside or most of outside. Tripod marks in center bottom.

Probably from Italy; fabric suggests it is related to roulette/Veneto ware? See Vroom, Byzantine to Modern Pottery, 132–33.

14. Figure 5.27

93-C-10. Carinated glossy orange bowl. From Trench 5. P.H. 0.038, est. diam. 0.14.

Small piece of rim and top of body and three other non-joining sherds. Flaring walls with carination 0.019 below rounded lip. Thick glossy orange glaze inside and out.

Hard, pink clay (10R 6/8). Some sparkling inclusions; no other visible inclusions. Rough break.

15. Figure 5.28

93-C-6a,b. Glazed bowl. From Trench 5. P.H. 0.038, est. diam. (int.) 0.20.

Two non-joining sections of rim preserve about half circumference. Shallowly flaring lower body turns up vertically below rim. Four grooves around body below rim. Rim turns out horizontally, slightly thickened at interior. Outwardly sloping rounded lip. No slip, mottled dark yellow glaze inside and outside.

Orange red clay (5YR 6/8). Rough break.

From Italy? There is an exact duplicate of this rim in shape, dimensions, and fabric, also from Trench 5, except that the glaze is green rather than yellow.
16. Figures 5.29, 5.30
94-C-1. “RMR” bowl. From Trench 5. P.H. 0.021, diam. (base) 0.047.

Beveled, unevenly trimmed ring foot with conical undersurface. Dark brown shield design painted in center, with traces of green glaze around edges of break. Sandy, light tan clay (2.5Y 5/3), darker gray at core (10YR 6/3). Tiny dark inclusions, no sparkling inclusions.

Similar to Oikonomou-Laniado, “La céramique proto-majolique d’Argos,” no. 4, fig. 6; Skartsis, *Chlemoutsi Castle*, p. 49, pl. 166 (from Elis); Mastrokostas, “Ανασκαφή του Ωδείου Πατρών,” 141, pl. 120α and Athanasoulis, “Μεσοβυζαντινό ναύδριο,” 344–45, pl. 112α-β (from Patras). See also Vroom, *Byzantine to Modern Pottery*, 128–29.

17. Figures 5.31, 5.32
94-C-2. “RMR” bowl. Trench 5. P.H. 0.046, est. diam. 0.15.

About 1/4 of rim preserved. Shallowly flaring wall turns up below rim to form carination. Outwardly thickened rim with outward-sloping flat surface. Slightly pinkish opaque glaze on inside and tip of rim; band of black around middle of body, band of pinkish red at point of carination, a wavy black line on top of rim, and a black band around exterior below rim.

Hard light yellow clay, 10YR 7/3 at break, 2.5Y 8/2 at surface. Tiny dark inclusions and a few sparkling inclusions. Frequent long pores.

18. Figures 5.33, 5.34

93-C-4. “RMR” bowl with handle. From Trench 5. P.H. 0.077, est. diam. 0.21.

Long sliver of bowl preserved, with one handle. Rounded body, out-turned thickened squared rim, flattened oval handle attaches at rim and just below rim. Glaze inside and on top of rim and handle, very encrusted. Thick black lines with green and red added on body. Red on top of rim and four short horizontal dark brown lines on top of handle.

Grayish white clay (10YR 8/2) with frequent tiny black inclusions and some sparkles. Rough break.

Southern Italian; probably fifteenth century. Similar bowls found at Otranto date to the fifteenth century; see Patterson and Whitehouse. “Medieval Domestic Pottery,” 151, no. 661, fig. 6.22. A similar bowl was found at Chlemoutsi: Skartsis, Chlemoutsi Castle, 52–53, no. 65, p. 151, fig. 5.65, p. 177, pl. 4.

19. Figure 5.35

96-C-9. Maiolica (?) rim. From Trench 10. Dim. 0.020 x 0.030.

Very small piece of rim. Flat out-turned rim with square lip with rounded edges. Upper part decorated with opaque, iridescent bluish white glaze; stripes of opaque (manganese?) black diagonally around rim. Outside glazed in glossy clear glaze.

Hard, fine dark red clay (2.5YR 5/6). Rare tiny white inclusions. Smooth break.

Interesting because this tiny fragment seems unparalleled.
20. **Figure 5.36**

93-C-5. Metallic ware pitcher. From Trench 5. P.H. 0.046, est. diam. (rim) 0.093.

Small part of base and lower wall preserved. Flat base bowed up in middle, trimmed 0.012 from edge. Vertical, slightly flaring wall, wheel-ridged interior. No slip, fine green glaze covers walls and undersurface.

Dark orange clay (2.5YR 6/8) with sparkles, rare small white inclusions.

21. **Figure 5.37**

95-C-5. Glazed jug. From Trench 14. Two pieces. P.H. 0.039, est. diam. 0.076; (body) P.H. 0.090.

Whole circumference of part of neck, a non-joining piece of rim, and two non-joining body sherds. Tall neck sloping smoothly from shoulder. Rim flares out shallowly, turns up at edge to rounded lip. Interior wheel-ridged. Thick glossy green glaze on exterior; thinner green glaze on interior.

Gray-light brown (10YR 6/4; 7/5YR 6.2); few small to large white inclusions, very few sparkling inclusions. Frequent small pores. Smooth break.
22. **Figure 5.38**

97-C-5. Jar with interior green wash. From Trench 19. P.H. 0.050, diam. (base) 0.039.

Base and small part of lower wall preserved. Flat base, unevenly trimmed, rises vertically and flares up and out to form rounded body. Interior wheel-ridged, with cone of clay in center bottom. Traces of green glaze on upper part of body; interior washed thinly with green glaze. Yellow-white clay (2.5Y 8/2) with few large dark brown and light brown inclusions. Common tiny dark and sparkling inclusions.

23. **Figures 5.39, 5.40**

96-C-5. Matt-painted wide-mouthed jar. From Trench 3. P.H. 0.036, est. diam. 0.185.

24. Figures 5.41, 5.42

95-C-1. Matt-painted jar. From Trench 5. H. 0.229, diam. (base) 0.065, diam. (rim) 0.057.

Base, one handle, about half of body, and rim preserved. Flat base, slightly rounded body, narrow neck flaring out at offset rim. Handles attached at rim and at point of maximum diameter. Slightly wheelridged inner body. Dark brown matt paint around top of rim inside and out; circles around body at shoulder, stripe down handle. 10YR 6/4-7/4.

25. Figures 5.43, 5.44

97-C-8. Matt-painted jar. From Trench 27.16 P.H. 0.037.

Small part of rim and part of one handle with oval cross-section. Slightly bulging neck at upper handle attachment and inwardly sloping thickened triangular rim. Stripes of black matt paint on rim, stripes across handle.

26. Figure 5.45
94-C-4. Incised glazed jar. From Trench 5. Max. dim. 0.079.

Small part of rounded shoulder and two small non-joining body fragments. Incised decoration formed with a three-toothed comb. Straight lines project radially from neck and encircle body; wavy vertical lines fill in the spaces between. Tan slip, green glaze over all on exterior. Thin yellow glaze on interior.

7.5YR 6/6; common small to medium light inclusions, some sparkles. Rough break.

27. Figure 5.46
93-C-3. Jar with pouring spout. From Trench 5. P.H. 0.044, est. diam. 0.078.

About 1/4 of neck preserved. Vertical, inwardly concave at rim. Four grooves around neck at top; incised wavy line below. Beginning of flare for pouring spout.

Light brownish orange clay (7.5YR 6/6) with rare small white inclusions. Sparkling inclusions, few pores at surface.
28. **Figure 5.47**

96-C-1. Jar with high-slung handles. From Trench 5. P.H. 0.104, est. diam. (rim) 0.06.

One handle and about half of rim, small part of body almost to point of lower handle attachment. High-slung strap handle attaches at neck. Vertical rounded rim slightly offset from shoulder. Body ridged; non-joining pieces of body have deep rounded ridges.

Very hard pinkish tan clay (7.5YR 6/4 at surface, 5YR 6/6 at core). Very large chalky and large dark brown inclusions. Few long pores and frequent small pores. Clean break.

29. **Figure 5.48**

97-C-3. Coarse jar. From Trench 19. P.H. 0.065, est. diam. (rim) 0.22.

Small part of rim and upper part of one handle preserved. Body flares out from thickened, in-sloping, triangular rim. Strap handle.

Coarse hard red-brown fabric (5YR 5/6 surface; 2.5YR 5/6 at break). Abundant large white and gray sandy inclusions; sparkling inclusions. Rough break.
30. **Figure 5.49**

93-C-7. Narrow-necked coarse jar. From Trench 8.17 P.H. 0.053, est. diam. 0.039.

About 1/3 of rim and part of one handle preserved. Vertical neck set off from shoulder by two ridges. Handle oval in section; attached at neck just below rim. Round lip. Hard light brown clay (7.5–10YR 6/6) with frequent very large white and small to medium dark and light brown inclusions. Sparkling inclusions. Smooth break.

---

31. **Figure 5.50**

97-C-7. Pithos. From Trench 3. P.H. 0.071, diam. undetermined.

Small piece of rim, exterior surface preserved, interior mostly chipped away. Slanting, thickened rim, with two rows of three ridges on exterior. Flat, inwardly sloping top surface.

Light brown clay (7.5YR 6/4) with abundant big chunks of ceramic temper and small to large white inclusions. Some large pores.
Cooking wares

The cooking wares, although particularly fragmentary, are among the most interesting types of pottery found at Zaraka. Most of the cooking vessels were found in Trench 5, adjacent to the gatehouse, and two types are prominently represented in this trench: many thick-walled handmade vessels, and a few examples of a very thin-walled (and easily broken) interior glazed flat-bottomed pot with thin, high-slung strap handles.

Handmade pots were widely used in southern Greece in the later medieval period, and the finds from Trench 5 simply confirm this. Reconstruction of an entire vessel was not possible, but the pots probably had a flattish base and one or two handles, and their closed and rounded shapes indicate they were used for wet dishes like stews.

The fine-walled wheel-made cooking vessels, on the other hand, are less widely known, although they have been found at Clarentza. They are strikingly different from the thick and heavy handmade stewpots, with their thin walls, glazed interiors, and thin strap handles; the blackened exteriors clearly show they were cooking pots. From uncatalogued sherds at Zaraka and the published Clarentza example, it is clear that these vessels were made with flat bases. They are clearly the product of professional workshops, unlike the handmade pots. Likewise, these must have been used for cooking stews or soups.

Fig. 5.51. Cat. no. 32 (96-C-8).

32. Figure 5.51

96-C-8. Cooking pot (?). From Trench 3. P.H. 0.037, est. diam. 0.16.

Small piece of rim preserved. Thickened, rounded triangular rim, outwardly thickened and slanting in, groove around rim on outside. Lightly ridged body. Coarse red clay (2.5YR 5/8) with gray core, common small to large white and gray inclusions, no sparkles. Very rough break. Like cooking fabric, but no sign of blackening.

Like the Byzantine and early Frankish forms from Corinth in Joyner, “Cooking Pots as Indicators of Cultural Change,” 187, fig. 4, A-F.
33. **Figure 5.52**

94-C-3. Handmade cooking pot. From Trench 5. P.H. 0.12, diam. (rim) 0.165.

One handle and about 1/4 of rim and body down to lower handle attachment. Vertical, slightly rounded walls, plain rounded rim flares out slightly at upper handle attachment. Strap handle attached at rim, rim pulled out where handle attaches.

Heavy coarse dark red/gray clay (2.5YR 4/6) with abundant small to medium sandy inclusions. Some sparkling inclusions. White incrustation on inside, very rough break.

This pot might have had one or two handles. Cf. Kontogiannis, “Excavation of a 13th-Century Church,” 516–18, no. 15, fig. 19; a handmade flat-bottomed pot dated to the mid thirteenth to mid fourteenth century, restored with one handle.

34. **Figure 5.53**

93-C-8. Handmade cooking pot with applied decoration. From Trench 5. P.H. 0.036, est. diam. 0.20.

Small piece of rim of handmade cooking pot. Almost vertical walls, slightly out-turned squared rim. Applied decoration of a pinched raised band of clay around rim.

Very coarse, gritty dark red fabric (2.5YR 5/6) with abundant large white inclusions. Very rough break.
Fig. 5.54. Cat. no. 35 (93-C-9).

35. Figure 5.54

93-C-9. Interior-glazed cooking pot. From Trench 5. P.H. 0.22, diam. rim 0.66.

About half of body, no base, most of one handle preserved. Tall, rounded, ridged body, five grooves below neck on body, inwardly concave neck with rounded lip. Very thin strap handle attaches at lip and at point of maximum diameter. Handle slants up from rim and turns down sharply to join body. Clear glaze on interior and top of handle. Coarse dark red fabric (2.5YR 5/8), gritty feel, rough break. Rare medium white and tan inclusions, tiny sparkling inclusions. Another rim from a very similar cooking pot also from Trench 5. Cf. Athanasoulis, Παλαιόντια, photo p. 44. Similar to cooking pots like those published in Vroom, “Pottery Finds from a ‘Cess-Pit,’” 323, and Pl. 7A-B, from Durrës, with comparanda dated to the fifteenth to sixteenth centuries, although the Durrës examples are glazed inside and out, and are described as thick walled.

Notes

1 In keeping with Sanders’s argument that widespread use of glazed pottery in Greece began in the twelfth century in urban centers, and was used in rural areas only later. Sanders, “New Relative and Absolute Chronologies.”

2 These bowls may well date from the post-monastic period of Zaraka. This is the only pottery with figurative decoration from Zaraka, in contrast to larger urban sites. The style of the bird itself is by no means unusual: see the two bowls from Athens published in Shear, Jr., “The Athenian Agora,” 527 and pl. 104a,b (which were found with a coin of Guillaume de Villehardouin).

4 For an overview of the period from all published Greek sites, see Vroom, Byzantine to Modern Pottery.

7 For example, Vasilakes, “Εισηγμένη ιταλική κεραμική,” 312–13, fig. 11.

8 Skartsis, Chlemoutsi Castle. On “RMR” pottery (and the inadequacy of the term, for which no useful substitute has been suggested) see Dufournier, Flam bard, and Noyé, “A propos de céramique ‘RMR.’”

9 Similar to unpublished jars from Agios Elias above Asea in Arcadia; datable pottery from this excavation includes fourteenth- to fifteenth-century Italian imports.

10 Athanasoulis, Γλαρέντζα, 44.

12 Trench 17: maiolica, glaze-painted (thirteenth to fourteenth century).

13 Trench 15: glaze- and slip-painted bowls (thirteenth to fourteenth century).

14 Trench 14: glaze- and slip-painted, sgraffito (one twelfth-century piece, the rest mostly thirteenth century).

15 Trench 19: glaze- and slip-painted; matt-painted wares like those from Trenches 3 and 4.

17 Trench 8: Imports from Italy (and elsewhere?); fourteenth to fifteenth century?

20 I have also seen an unpublished sherd from a very similar vessel in the Corinth storerooms.
